Corn and Soybean Updates in States with Late Harvests

Survey respondents who reported corn acreage as not yet harvested in Illinois, Michigan, Minnesota, and Wisconsin and survey respondents who reported soybean acreage as not yet harvested in Georgia, North Carolina, South Carolina, and Virginia during the surveys conducted in preparation for the *Crop Production 2009 Summary* were re-contacted between late January and early February to determine how many of the acres were harvested or still intended for harvest and to record the production from those acres. Based on this updated information, several changes were made to the estimates published in the *Crop Production 2009 Summary*. Because unharvested production is a component of on-farm stocks, changes were made to the December 1 on-farm stocks levels comparable with the production adjustments as well. Respondents with unharvested corn in North Dakota and South Dakota will be interviewed at a later date.
